

Задание:

Описание задачи:

1. Просканируйте все найденные поддомены и выявите открытые порты TCP 80 и 443.
2. Определите версии сервисов, работающих на этих портах.
3. Представьте результаты сканирования в формате gntar.
4. Проведите анализ ПО веб-серверов на примере 15 любых хостов.

В результате выполнения задания соберите текстовый отчет с развернутым описанием процесса сканирования и приложите ссылки на все необходимые файлы.

Для простоты будем использовать следующий урезанный список поддоменов, найденный на предыдущем шаге (в противном случае, сканирование затягивается очень надолго):

3d.wb.ru
a.wb.ru
ad.wb.ru
adp.wb.ru
alias.wb.ru
analytics.wb.ru

Инструменты:

- nmap – основной инструмент для сетевого сканирования, определения открытых портов и попыток выяснения версий сервисов.

Использование:

```
nmap -p 80,443 -sV --version-intensity 5 -A -iL wb_targets -oN  
wb_result_scan.txt -oG wb_result_scan.gnmap
```

Описание опций:

- **-p** Сканирование только заданных портов.
- **-sV** Определение информации о службе/версии.
- **--version-intensity** Интенсивность проверки версии.
- **-A** Включение определения ОС, версии, сканирования с помощью скриптов и трассировки маршрута.
- **-iL** Чтение входных данных из файла, содержащего список хостов/сетей.
- **-oN** Сохранение результатов сканирования в текстовом формате в файле
- **-oG** Сохранение результатов сканирования в формате gnmap в файле

Как итог запуска - я получаю следующие результаты сканирования по списку поддоменов:

```
# Nmap 7.94SVN scan initiated Thu Dec 18 21:46:20 2025 as: nmap -p 80,443 -sV --version-intensity 5 -A -iL wb_targets -oN wb_result_scan.txt -oG wb_result_scan.gnmap

Nmap done at Thu Dec 18 21:51:02 2025 -- 44 IP addresses (44 hosts up) scanned in 282.36 seconds

Выводы по сканированию:

Целевые хосты: сканирование проведено для 44 поддоменов wb.ru, из которых 39 хостов были доступны.

Результаты сканирования.

Общая статистика:

- Всего поддоменов: 44
- Доступных хостов: 39
- Неразрешимых доменов: 5
- Открытых портов 80/tcp: 36
- Открытых портов 443/tcp: 39

Анализ веб-серверов.

1. Nginx (основной веб-сервер)

Количество хостов: 22

Особенности:

- Широкое использование HTTP/2
- Поддержка TLS 1.2/1.3
- Редиректы с HTTP на HTTPS
- Распределены по различным сервисам компании.

Примеры хостов: auth.wb.ru, bb.wb.ru, development.wb.ru, en.wb.ru.

2. Tengine (Nginx-based от Alibaba)

Количество хостов: 4

Особенности:

- Возвращает код 421 Misdirected Request
- Строгая политика HSTS
- Используется для балансировки нагрузки

Хосты: a.wb.ru, reports.wb.ru, wildmetrics.wb.ru

3. WBAAS с Angie

Количество хостов: 10

Особенности:

- Кастомные идентификаторы ошибок (Status-NO-Id)

- Интеграция с NEL (Network Error Logging)
- Единая система мониторинга через nel.wb.ru

Хосты: [bank.wb.ru](#), [drive.wb.ru](#), [finance.wb.ru](#), [forms.wb.ru](#), [id.wb.ru](#), [map.wb.ru](#),
[service.wb.ru](#), [stream.wb.ru](#)

4. WRP (Wildberries Reverse Proxy)

Количество хостов: 2

Особенности:

- Широкие CORS политики
- Кастомная страница "Hello from WRP"
- Поддержка различных HTTP методов

Хосты: [catalog.wb.ru](#), [meta.wb.ru](#)

5. Прочие сервисы:

- HAProxy: sp.wb.ru (балансировщик нагрузки)
- Golang: dnd.wb.ru, mta-sts.dnd.wb.ru

Анализ SSL/TLS конфигурации

Сертификаты:

1. Wildcard сертификаты (*.[wb.ru](#)):
 - Действительны с июля 2025 по август 2026
 - Поддержка SAN: DNS:*.wb.ru, DNS:[wb.ru](#)
 - Используются на большинстве поддоменов
2. Специфические сертификаты:
 - finance.wb.ru - отдельный сертификат
 - dnd.wb.ru - собственный сертификат
 - fw.wb.ru - отдельный сертификат
 - insole.wb.ru - сертификат для nosoc.wb.ru

Безопасность:

- HSTS: Повсеместно внедрено с preload
- Security Headers:
 - X-Content-Type-Options: nosniff
 - X-Frame-Options: DENY
 - Strict-Transport-Security

Детальный анализ по категориям сервисов

Аутентификация и идентификация:

- auth.wb.ru - основной сервис аутентификации
- id.wb.ru - система идентификации
- openid.wb.ru - OpenID Connect провайдер

Финансовые сервисы:

- bank.wb.ru, finance.wb.ru - финансовые операции
- Используют WBAAS с Angie
- Отдельные SSL сертификаты

Медиа и стриминг:

- bb.wb.ru - видео контент
- stream.wb.ru - стриминг платформа
- jitsi.wb.ru, meet.wb.ru - видеоконференции

Внутренние сервисы:

- catalog.wb.ru, meta.wb.ru - каталог товаров (WRP)
- development.wb.ru - среда разработки

- team.wb.ru - внутренний портал

Аналитика и мониторинг:

- reports.wb.ru, wildmetrics.wb.ru - системы отчетности
- nel.wb.ru - сбор ошибок клиентов

Выявленные особенности инфраструктуры

Архитектурные паттерны:

- Микросервисная архитектура - различные сервисы на разных технологических стеках
- Единая система мониторинга через NEL
- Стандартизованные ошибки через Status-NO-Id
- Единая система балансировки через Tengine

Технологический стек:

- Основной веб-сервер: Nginx
- Балансирущи: Tengine, HAProxy
- Кастомные прокси: WRP
- Платформа как услуга: WBAAS с Angie

Выводы по безопасности

Сильные стороны:

1. Единая система мониторинга ошибок
2. Повсеместное использование HSTS
3. Стандартизированное использование security headers
4. Актуальные SSL сертификаты

Области для возможных улучшений:

1. Использование единообразных технологий, т.к. разнообразие веб-серверов может усложнить поддержку
2. Открытые порты 80 всегда редиректят на HTTPS, но порт остается открытым
3. Некоторые сервисы возвращают детальную информацию об ошибках

Анализ ПО веб-серверов на примере 15 любых хостов.

Т.к. нам нужно провести анализ ПО веб-серверов, то сканировать хосты мы будем с помощью следующей команды nmap:

```
nmap -p 80,443 -sV --version-intensity 5 -A <web-server-address>
```

где <web-server-address> - адрес соответствующего веб сервера.

1.

```
nmap -p 80,443 -sV --version-intensity 5 -A ozon.ru
```

Результат:

```
Starting Nmap 7.94SVN ( https://nmap.org ) at 2025-12-19 00:15 +05
```

```

Анализ и выводы:

1. Многие веб-ресурсы скрыты за reverse proxy, такими как nginx (разных версий), cloudflare http proxy и AkamaiGHost (у microsoft)
2. Встречаются веб-ресурсы, которые управляются с помощью сервиса (демона) Apache httpd (у кого-то указана версия, у кого-то нет).
3. Судя по всему, во многих больших software корпорациях используются свои решения для хостинга веб ресурсов: например, ресурс go.dev (которым владеет корпорация google) хостится с помощью сервиса (демона) Google httpd.
4. Встречаются ресурсы (например, rsdn.org), которые хостятся на веб серверах от microsoft напрямую, без всяких reverse proxy.
5. Сканирование ОС давало либо невозможность явно определить ее, либо, что это Linux примерно в соотношении 50/50.
6. На самом деле данная выборка абсолютно не репрезентативна. Я например, могу подобрать 15 ресурсов, которые все хостятся на веб серверах от microsoft напрямую, без всяких reverse proxy.
